ALF#3

(Alfie-baby to her friends.)

(JEM x Afghan af) X White Russian af.

In a small pot...but with a decent drop on it.

1 Ltr fert bottle in with her..to give an idea of height.

Approx 12-16 inches in height..pheno height reasonably stable..dependant on conditions.

I got a white..

BUT..

majority pink..or purple.

Same colour as JEM underneath..but a Tric change picked up off the White Russian give a whiter tric..which mutes the colours..

so you red is pink..your purple is soft purple.

It also seem to iron out the colour/strength difference..with all colours kicking equally.

The seed out came from the fat headed ultra indy phenos.

IF you see this pheno coming..make sure you have good odour control..IT STINKS.

In JEM..there is a Stunning taste/high pheno..

BUT..it is an elusive..

It was...and still is one of the best I have ever had.

By f4 on JEM..

lots of help from friends and lots of home-work said the Stunner was related to the Afghan content..

so an AF afghan was added.

Then the WRuss (Affy dom male)...to try to pull out the trait.

In the Fat Headed ALF#3 pheno..it is strongly there.

Keep your noses open for Incense smells coming up when you water her.
