### Rm-18 Gypsy's Kiss

First lady queen mother of white widow meets petroila headstash from northern california. Strong medicine, lime green frosty nuggets of pure joy. Medium sized plants, easy to grow and clone, AAA all the way.

Inside finish time:8 weeks/ Outside finish time Early Oct./ Variation: 2/ Odor level: 2.5/ Mold resistance; 4.5/ Yield: 5/ Ease of growth:6/ Feed level: 5/ Stretch: 2-2.5x Sativa/Indica 15/85

#### Rm-23 Blueberry Blast

If quality and commercial yields are what you seek, then this f-1 hybrid of reefermans NL#5 and Blueberry Indica will blast you into the great beyond. Careful parent selection have made this the rocket of blueberry hybrids.

Inside finish time:7-8 weeks/ Outside finish time: Early November/Variation 4/ Odor Level: 2.5/ Mold resistance: 4.5/ Yield:4.5/ Ease of growth: 5/ Feed level: 5/ Stretch:2.5x Sativa/Indica 50/50

#### Rm-30 Asia Girl

(Thai X Nepalese) X Reeferman's NL#5 Watch out, Asia girl has come to town. Super sativa structure but well behaved with lateral branches. Thai dominant high with the added crystal of NL#5 She will rock your world - amongst the breeders favorites. Fruity aromas.

Inside finish time:9 weeks/ Outside finish time:Early November/ Variation: 4/ Pdpr :eve; 2.5/ Mold resistance: 4.5/ Yield: 4.5/ Ease of growth: 4 / Feed Level 3/ Stretch 2.5-3x Sativa/Indica 65/35

#### Rm-33 Blackseed (Pure)

Blackseed is mostly a mexican IBL that Dates back to about 1974 and fueled early BC pot culture. It stands as proof that strong cannabis is not a recent invention. It used to be called the pound plant as it makes big sativas with big yields. Great plant for the kootenays, where it was first bred by hillbillies. it needs lots of root space and makes frosty light green lemony nice sized buds. Old school sativa high. Great for breeding.

Inside finish time: 9-10 weeks/ Outside finish time: early October/ Variation: 2/ Odor Level: 2.5/ Mold resistance: 4.5

#### Reeferman's Supreme Hashplant

Reeferman's state of the art hashplant is an exceptional hybrid well suited for commercial production in sea of green and bucket systems. A hardy strain great for beginners as it is resistant to pests and disease. Excellent frost production, AAA super bag appeal. Lime green. Low Odor. Heavy Indica. Stalky plants.

Inside finish time: 7-8weeks / Outside finish time early oct./ Variation: 2.5/ Odor level 2.5/ Mold resistance 4/ Yield 6/ Ease of growth: 6/ Feed level: 6/ Stretch 1.5-2 sativa/indica 0/100

#### Rm-44 Great Garberville

An old IBL from Garberville CA, this one was originally a cross of old school thai and Afghani/Hawaiian and has since been inbred to create a true breeding strain. Dry earthy hashy aromas, serious couchlock, great yield, strong plants. Classic old school herb. Solid nuggets with great big bag appeal.

Inside finish time: 7-8 weeks/ Outside finish time:Mid Oct./ Variation: 2/Odor level: 2/ Mold resistance: 4.5/ Yield:5.5/ Ease of growth: 5/ Feed level: 5.5/ Stretch 2-2.5x Sativa/Indica 15/85

#### Rm-45 Apple Pie

Acapulco Gold x Highland Nepalese. True American Weed. A landrace based 100% Sativa hybrid that will fuckin' amaze you. Tops in tokes, true reefer madness, like heroin in a joint except you dont barf. Old school sativa lovers need to try this. Big super vorious sativas with big yields. Great outdoors in couthern climates. A real texas ball buster.

Inside finish time: 10-14 weeks/ Outside finish time: mid-late oct./ Variation: 3/ Odor leverl:2/ Mold resistance: 5.5/ Yield: 5/ Ease of growth 4.5/ Feed level: 3.5/ Stretch 2.5-3x

Sativa/Indica 100/0

#### Rm- 46 El Diablo

A smoot sativa smoke that tates like grapefruit with orange undertones, werecieved this true breeding strainwith very little backround info, but we believe it to be from central africa. Never the less we have grown to love this one, makes wonderful hash and oil, nice zippy and creative buzz, great daytime smoke.

Inside finish time: Mid Oct./ Variation: 2/ Odor Level: 4/ Mold resistance: 3.5/ Yield: 4/ Ease of growth: 5/ Feed level: 3.5/Stretch: 2.5x Sativa/Indica 75/25

#### Rm-54 Reeferman's Herijuana

Using select herijuana seeds from the original breeder, we have taken the sativa pheno and crossed it back to the indica pheno. Really nice smoke in every sence of the word, Nice balanced high, super crystal production. Nice outdoor plant.

Inside finish time: 9 weeks/ Outside finish time: Mid Oct./ Variation: 4/ Odor leverl: 4/ Mold resistance: 5/Yield: 5/ Ease of growth: 5/ Feed level: 5/ Stretch: 2.5x Sativa/Indica 30/70

#### Rm-55 Purple Pineberry

A classic BC outdoor strain from Texada which has been dominating the commerical market for the past few years. Also know as "The purple pound plant" this one yeilds big and finishes fast outdoors too. Aroma is herby and hashy with hints of raspberry. Buds range from lime green to lavender to purple. are easy to clip and have great bag appeal. Very low odor strain. Prefers to grow outdoors but works indoors too.

Works great both indoors and out. Has distinctive grapey, berry, piney, peppery, and earthy flavours. Great medicinal strain. Hardy. Good pest resistance.

Inside finish time 7-8 weeks/ Outside finish time: early oct./ Variation: 3/ Odor level:3/ Mold resistance: 5/ Yield: 5.5/ Ease of growth:5/ Stretch: 2x Sativa/Indica 20/80

#### Rm-58 Blue thunder

A classic Prairiefire seeds strain recreated, we;ve taken a trio of exceptional and super stable kodiak gold lavender f9 males and mated them with our wonderful blueberry sativa pheno

goddess to recreate an improved version of the original blue thunder. Excellent smoke, hard to keep around so you might want to hide some away for later. 60% sativa, very potent meds the high will keep you coming back for more. Great anti-depressant weed, uplifting and stress relieving. Finishes with rock hard nuggets. Easy trimming, some plants have deep purple buds and deep wine coloured stalks.

Inside finish time: 8-9 weeks/ outside finish time: mid-late oct./ Variation: 2.5/Odor level: 2.5/ Mold resistance:4.5/Yield: 5/ Ease of growth: 5/ Feed level: 4.5/Stretch 2.5x Sativa/Indica 60/40

#### Rm-64 Kodiak Gold (Pure)

This is the original KG from Kodiak Island, AK. KG is some strong and long lasting herb. this is proven medicine for many different conditions like hep-c and aids. 40% sativa, makes some sparkley golden to lavender colored rock hard buds that are just rich in fragrance with pungent berry, grape, grassy and hashy aromas. High THC. Strong Creeper effect.

Inside finish time:7-8 weeks/ Outside finish time early Oct./ Variation: 2/ Odor Level: 2/ Mold Resistance: 5/ Yield: 5/ Ease of growth: 5/ Feed level: 5.5/ Stretch 2.5x Sativa/indica 40/60

#### Rm-65 Romulan x Blueberry Sativa (feminized)

The original romulan from vancouver island merges with our old school blueberry sativa pheno to make one humdinger of a strain. this one grows fairly columnar with a nice frame and short side branches. Save have blue hues. Really unique herb with excellent potency this is hard to build a tolerance to. has a nice dry piney and blueberry aromas. this one is a complex mix of indica and sativa which comes on strong and stays long. Decent mite and mold resistance. Great frost production, makes some killer hash. Top shelf medicine. Works well in Coliseums and sea of greens. Great plant for beginners as satisfaction comes easy.

Inside finish time 8-9 weeks/ Outside finish time: late oct.- early Nov./ Variation: 3/ Odor level: 4.5/Mold resistance:4.5/ Yield: 4/ Ease of growth: 5/ Feed level: 4.5/ stretch: 2-2.5 Sativa/indica 30/70

#### Rm-66 Butterscotch Hawaiian

A cross of a hawaiian with our special butterscotch afghan this is for those that like the big solid colas. makes light green easy to clip large frosty nuggets. Great rich butterscotch taste. Well suited to commercial production tables. Awesome medicinal strain with strong pain relieving qualities and longlasting couchlock high.

Inside finish time: 8-9 weeks/ Outside finish time: Mid oct./ Variation: 4/ Odor level: 2.5/ Mold resistanceL 3.5/ Yield: 5.5/ Ease of growth/ Stretch: sx Sativa/Indica 20/80

#### Rm-69 Blueberry magic (Feminized)

A select headstash pheno of magic carpet ride(headstash Afghani x Cambodian) is crossed with the blueberry sativa to create some blueberry magic. Our sweetest blueberry flavoured strain with interesting spicy and exotic woody aromas. makes some eggs sized ultra frosty nuggets. Good plant for SCROG. Some have interesting reddish purple hues.

Inside finish time:8-10 weeks/ Outside Finish time: Early Nov./ Variation:3/ Odor level:4.5/ Mold resistance: 4.5/ Yield: 4/ Ease of growth:5/ Stretch2-2.5x Sativa/indica 50/50

#### Rm-70 Big Thunder

A cross of kodiak gold and a select humboldt strain, big thunder lives up to it's nam, huge plants

with huge buds and huge yields of hugel stoney herb. The flowers have a unique rich yet grassy aroma that old schoolers will love. The finished buds are a lovely green and golden and form into greasy chunky spears. Some will have striking lavender hues. This one has a strong happy creative balanced indica/sativa high. Creeper weed. THE high lasts long and can be felt as a warm tingle from head to toe with a strong influence on the frontal lobes.

Inside finish time: 8-9 weeks/ outside finish time: mid-late oct./ Variation: 2.5/Odor level: 2.5/  
Mold resistance:4.5/Yield: 5/ Ease of growth: 5/ Feed level: 4.5/Stretch 2.5x Sativa/Indica 60/40

#### Rm-71 Odin's Hammer

Odin kept his hammer in his pants, only the ladies and the occasional enemy he wished to defile ever got to see it so the legend goes. Odin's Hammer is an F1 hybrid of mythical proportions comprised of Kodiak Gold (Thunderfuck) and Acapulco GOld. Tha Hammer offers some real WHACK in the head department. As both parents are some real head hitters, great weed for sex and frolick. I will bet Odin's Hammer was pretty abused just like this F1 will be! Nasty Crazy-ass grass! Be careful this is some serious creeper!

Inside finish time:10-12 weeks/ Outside finish time: Early November/ Variation:2 / Odor Level: 2/  
Mold resistance:5/ Yield: 4.5/ Ease of growth: 5/ Feed Level:3/Stretch 3-4x Sativa/Indica 80/20

#### Rm-72 Pink Kush x Blackseed

An exeptional hybrid with piney, floral and tangerine aromas. A refined 50/50 high. this one is a flavorful with a great balanced high. GOod yielder of beautiful herb frosty lime green, some with pink pistils.

Inside finish time: 9-10 weeks/ Outside finish time: Nov/ Variation: 4.5/Odor level: 2.5/ Mold  
resistance: 4.5/ Yield 5/ Ease of growth:4/ feed level: 4.5/ Stretch: 2-2.5x Sativa/Indica 80/20

#### Rm-74 G-13 x Blueberry Sativa

A very unique blueberry hybrid, the g-13 was crossed with a blueberry sativa to increase the stretch and make a plant well suited for commercial production with connoisseur quality and a long lasting blissful thought provoking experience. Strong euphoric high will affect the most tempered smokers. Old School weed.

Inside finish time: 9 weeks/ Outside finish time: Nov/ Variation: 3/ Odor Level: 4/ Mold resistance:  
4/Yield: 5/ Ease of growth: 5/ Feed Level 4.5/ Stretch: 2-2.5x Sativa/Indica 40/60

#### Rm-75 G-13/Black Widow (F4)

A compact g-13 x black widow indica selection originally from pacific now inbred to the F4 generation. Grapefruit diesel and spicy aromas make this weed a pleasure to smoke. Next to no stretch in flowering. good for closets or SOG. Also good for breeding since its an F4. Strong medicine with anti-anxiety qualities. Positive contermpulative weed with a full body high.

Inside finish time: 7-8 weeks/ Outside finish time: Late Oct. / Variation: 3/ Odor Level: 3/ Mold  
resistance: 4.5/Yield: 5/Ease of growth: 5/ Feed Level: 5/ Stretch: 1.5 Sativa/indica 30/70

#### Rm-76 Nutcruncher

Airborne G-13 x Petrolia Headstash. Some Seriously Strong Indica that Reeferman found made his left nut tingle. Big chunky nugs, low odor. Easy to grow plant good for beginners. Rich chocolatey taste. Nice green nugs with plenty o' frost. A proven medicinal strain excellent for pain. Total couchlock. Great outdoors too.

Inside finish time: 7-8 weeks/ Outside finish time: Mid Oct./ Variation: 3/ Odor level: 2/ Mold Resistance: 4.5/ Yield: 5/ Ease of growth: 6? Feed Level: 6/ Stretch 1.5-2x Sativa/Indica 0/100

#### RM-77 Gsus

God x G13. You have to go through Gsus to reach God. A match made in heaven with many redeeming qualities, Gsus is squat and a skanky, a fairly easy to grow strain. Needs pruning on a daily basis when flowering. Big, rock hard, skunky, greasy nuggets. A real couchlocker

Inside Finish Time 8-9 weeks

Outside Finish time Mid Oct

Variation 3

Yield 3

Sativa/Indica 90/10

Rm-78 Senor Garcia

#### Oregon Purple Thai x Panama Red,

Some trippy sativa named in honor of Jerry Garcia. A joint of this will send you on a journey through time and space. For experienced growers only, these plants are very touchy feeders preferring organics and a light feeding regime 1/3 to 1/2 strength. Striking Purple hues and red hairs make this some pretty pot too. Some will have full on purple stalks. A small % will be mutants (see Rm-13 Potent Purple). Very Pleasant sweet and sour aromas.

Inside finish time: 10-12 weeks/ Outside finish time: Dec/ Variation: 2/ Odor Level: 3/ Mold

Resistance: 5/ Yield: 3/ Ease of Growth: 2.5/ Feed Level: 2.5/ Stretch: 3.5-4x

Sativa/Indica 90/10

#### Rm-82 Lowland Afghani

An F-1 hybrid of 2 lowland afghani cultivars. Solid dependable outdoor, makes mid size plants with large nuggets. low odor. Sweet, fruity and slightly skunky. Good anti-anxiety herb.

Inside finish time: 7-8 weeks/ Outside finish time: Mid-Late sept./ Variation: 3/ Odor Level: 2/ Mold

resistance: 5/ Yield: 4/ Ease of growth: 4.5/ Feed level: 4/ Stretch: 2.5x

Sativa/Indica 0/100

#### Rm-83 Blue Nepalese

A mostly nepalese sativa hybrid with some blueberry sativa in its genes, this one finishes fast for a sativa with dry fruity, berry, lemony and bubblegum aromas. Strong uplifting and motivating euphoric sativa dominant buzz. Some plants will have interesting blue and purple hues with golden hairs. Makes a dominant cola with nice side branching.

#### Rm-86 Red Congolese

This F-1 is a cross of exceptional Congolese Sativa with a stable mexican/Afghani Super forsy plants produce aromas like sandalwood and honey with a hint of haze. This high is outstanding and very up and powerful yet motivated after its onset. Good Commercial potential for SCROG or SOG. Good Sativa for beginners.

Inside finish time: 10-12 weeks/ Outside Finish time: Late Oct./ Variation: 3/ Odor Level: 4/ Mold

resistance:4/Yield:5/Ease of Growth: 5/ Feed Level; 4.5/ Stretch: 2-2.5x Sativa/Indica 80/20

#### Rm-89 Nigerian Nightmare

Awesome early outdoor plants with super frost production, nice chunky nuggets with some strong dry skunky aromas with mango carrot and mandarin orange undertones. A crowd pleaser with a happy euphoric high. Good mold resistance. Compact plants, Very photoperiod sensitive. If vegged under 18 or 24 hour from seed or clone they can be put outside will start flowering quickly. We recommend vegging in 1 gallon pots until 3 feet tall if starting indoors. Multiple crop potential outdoors in the summer.

Inside finish time: 8 weeks/ Outside finish time Mid-Late sept./ Variation: 3.5/ Odor Level:3/ Mold Resistance: 5/ Yield: 4.5/ Ease of growth: 5/ Feed Level: 4.5/Stretch 2-2.5x Sativa/Indica 50/50

#### Rm-90 Tropical Timewarp

A cross of Punta Roja Columbian Red with our Beloved Timewarp (african) Cutting. Big ass crazy sativas that kick ass in the southern states, australia and southern europe. Strong Sativa buzz with a hint of indica that hits in the chest and follows with a case of the giggles. Sweet fruity tropical aromas, this is very aromatic herb. Loves organics. Moderate feeder. Lime green buds with red hairs. Super frosty. Give her lots of love and she makes huge bushes and crazy yields of outstanding herb.

Inside finish time:10-13/ Outside Finish time: Early Nov./ Variation: 3/ Odor Level:3./ Mold Resistance:5/Yield:5/Ease of Growth:3/Feed level:3/Stretch:3-3.5x Sativa/Indica 90/10

#### Rm-93 Reeferman's Grapefruit

An F1 cross to the original grapefruit mother the SOL built their reputation upon. This outstanding hybrid will amaze you, be prepared to tie up many heavy colas of indica dominant pungent grapefruit nuggets. Extreme Frost production! High yields, well suited to any type of garden from closets to coliseums. This grapefruit is also stronger than the original, watch out!

Inside finish time: 8 weeks/ Outside finish time: Late oct. / Variation: 4/ Odor Level: 3.5/ Mold resistance: 3/ Yield 6/ Ease of growth:5/Feed Level: 5.5/Stretch: 2-2.5x Sativa/Indica 20/80

#### Rm-95 Reeferman's Sour Diesel

The original sour diesel clone was crossed with a classic citrusy Kush ibl to make something really explosive. Easy to grow, making high yields, crazy shit in both the flavour department and deep stash headies compartment, weed that you lied to your wife about and said it was gone much sooner than it actually was, all just to fulfill your hunger your fiendish fiendish cannahunger... This weed proves some good things actually come from New York... **SOME BAD ASS SHIT!!!**

Inside Finish time: 9-10 weeks/ Outside finish time: Nov/Variation: 4/ Odor Level:5 /Mold Resistance: 4.5/ Yield: 5.5/ Ease of Growth; 6/ Feed level:5.5/Stretch 2-2.5x Sativa/Indica 50/50

#### Rm-96 King's Cross

##### **2005 ICMAG 420 Winner - Best Hash**

King x (King x Charles Kush) this is a backcross to a highly coveted Vancouver Island clone. Compact growth. Extreme Lemony, Piney, Kush aromas. Strong herb. A favorite amongst friends.

Inside finish time: 8-9 weeks/ Outside Finish time: Nov/ Variation: 4/Odor Level: 4/ Mold resistance:3.5 / Yield: 5/ Ease of growth: 4.5/ Feed Level:5/ Stretch: 2-2.5x Sativa/Indica 10/90

#### Rm-98 Reeferman's Champagne

Reeferman's version of the Champagne cutting that was in vogue throughout the PNW in the late 90's. The Champagne is a hashplant/ Kush Hybrid and we crossed it lightly with the pollen from a super sweet burmese male. This one smells of sweet sparkly champagne with dank hashy undertones. A good producer of 50% indica 50% sativa herb that is very relaxing and makes nice hash.

Inside finish time: 8-9 weeks/ Outside finish time: early nov/ Variation:4/Odor Level: 2.5/ Mold Resistance: 4/Yield: 5.5/ Ease of Growth: 5/ Feed Level: 5/Stretch: 2.5x Sativa/Indica 50/50

#### Rm-99 Love Potion # 1

##### **2004 Cannabis Cup Winner - Best Sativa And Best Herb Overall**

Love Potion #1 is an Outstanding Hybrid of G-13 and Santa Marta Columbian Gold backcrossed with the original SMCG male. It's sweet and skunky piney lemony goodness that will blast you into the sativasphere soaring high clearly cutting through anything you've smoked before. Great SOG and SCROG plant.

\*Sensitive to light leaks in the flowering room indoors, make sure the room is completely dark in the night cycle.

Inside Finish Time: 10-12 weeks/ Outside Finish time: Late Nov/ Variation: 3.5/ Odor Level: 3/ Mold resistance: 4.5/ Yield: 4/ Ease of growth: 4/ Feed Level: 4.5/ Stretch: 2-2.5x Sativa/Indica 70/30

#### Rm-100 Full Melt Madness

A sweet and fruity Afghani hybrid that is easy to grow, easy to clone, resistant to pests and powdery and as the name suggests she makes some awesome bubble hash. Nice Relaxing after dinner smoke. Good Sea of green plant. Medium green buds with orange hairs.

Inside finish time: 8 weeks/ Outside finish time: Mid October/ Variation: 3.5/ Odor Level: 3/ Mold Resistance: 4/ Yield: 5/ Ease Of Growth: 5/ Feed Level: 5/ Stretch: 2-2.5x Sativa/Indica 50/50

#### Rm-101 Reefer Madness

An Elite male from Reeferman's Original Strain Blackseed (Mexican) has been crossed to G-13 Airborne. A well behaved F1 hybrid with some delicious old school pine and diesel tastes. Strong well balanced euphoric high that will last for several hours. A great mix of Indica and Sativa. Great yielding SOG plant. Nice Bag Appeal. **Very Chronic Herb!**

Inside Finish Time: 8-9 weeks/ Outside finish time: Mid October/ Variation: 3/ Odor Level: 4.5/ Mold Resistance: 4/ yield:5/ Ease of Growth:5/ Feed level: 5/ Stretch: 2-2.5x Sativa/Indica 30/70

#### Rm-102 Skunkaberry

A most delicious cross of newberry with a chinese indica male. One of our tastiest strains with sweet and skunky berry flavours and a relaxing indica dominant high. Good Night time smoke. Easy to grow, decent mold resistance, also works well outdoors. Great SOG plant. Excellent Bag appeal.

Inside finish time: 8-9 weeks / Outside Finish time: Mid October/ Variation: 3/ Odor Level: 4.5/  
Mold Resistance: 4/ Yield: 5/ Ease of Growth: 5/ Feed level: 5/ Stretch: 2-2.5x Sativa/Indica 30/70

#### Rm-103 Willijuana

An F1 hybrid of some of our favourite sativas, Vietnamese and Burmese using the same Vietnamese mother that was used in Willie Nelson. If you are looking for a tasty potent sativa that yields well look no further than willijuana. Unique sweet and sour skunky aromas with a high that will elevate and captivate audiences for hours. Frosty buds that feel greasy when squeezed. Good Mold resistance. Slightly bushy with many branches that are filled with buds. Excellent SCROG or Bucket strain indoors. Huge yields, outdoors in the southern USA.

Inside finish time: 10-13 weeks/ Outside finish time: Mid-Late October/ Variation: 3/ Odor Level: 3/  
Mold Resistance: 5/ Yield: 5/ Ease of Growth: 5/ Feed level: 4.5/ Stretch: 2.5-3x Sativa/Indica 100/0

#### Rm-104 SugarWarp

An F1 hybrid of Burmese and a local favorite Texada Timewarp. Our sweet and frosty burmese male was used to pollenate the 26 year old timewarp cutting resulting in a big yielding sativa dominant plant that smells of sweet nectar and tropical fruits. Long Lasting euphoric high that will put a smile on your face for hours. Low Paranoia strain. Good yields indoors in well lit gardens, works well in a SCROG or Buckets. Huge yields outdoors, can get very bushy. Good mold resistance. Great plant for climates that allow for growing into early October.

Inside finish time: 9-11 weeks/ Outside Finish time: Early- Mid October/ Variation: 3/ Odor Level: 3/  
Mold resistance: 5/ Yield: 5/ Ease of Growth: 5/ Feed level: 4.5/ Stretch: 2.5/3x Sativa/Indica 75/25

#### Rm-105 Viper

A new generation sativa F1 hybrid of our elite blackseed mother pollinated with a trio of frosty aromatic burmese fathers. The viper is some seriously chronic sativa that is required growing material for anyone who considers themselves a cannabis connoisseur or terpenoid enthusiast. She is sweet, skunky and piney with exotic aromas that are hard to describe but linger on the tongue for hours. Viper will soon be treasured for her frost caked greasy buds and refined very potent stratospheric sativa high. Great yields.

Inside finish time: 9-11 weeks/ Outside finish time: Early Mid October/ Variation: 2.5/ Odor Level: 3/  
Mold Resistance: 4/ Yield: 5/ Ease of Growth: 5/ Feed level: 4/ Stretch: 2-2.5x Sativa/Indica 95/5

#### Rm-106 Reefermans G

G13 Airborne X (G13 Airborne X Santa Marta Colombian Gold). From our cup winning love potion #1 line we isolated a G13 dominant male that was crossed back onto the G13 Airborne cutting. Produces typical G13 type buds well suited for indoor production in SOG. Low odor with good pest, mildew and mold resistance she is easy to grow. Great closet strain. Low stretch. Tastes like herbal resin with lightly sweet and subtle lemony flavors. Great bag appeal. Good all around indica megs.

Finish Time: 9 weeks/ Outside Finish Time: Early- Mid October / Variation: 3/ Odor level: 2 / mold resistance: 5/ Yield: 5.5/ ease of Growth: 5.5/ Feed Level: 5/ Stretch: 1.5x Sativa/ Indica: 20/80.

#### RM-107 Reeferman's Space Queen

Romulan X c-99, a Vancouver island classic Reborn. Stinky, complex aromas with strong pine, pineapple and earthy tones. Strong well balanced sativa/ indica high. Great bag appeal. Good SOG or SCROG strain.

Finish Time: 8-9 weeks/ Outside Finish Time: Early October/ Variation: 3.5/ Odor level: 5/ Mold Resistance: 4.5/ Yield: 5.5/ Ease of growth: 5/ Feed level: 5/ Stretch:2-2.5x.  
sativa/ Indica: 50/50

Rm-108 Phnom Phen

Thai X haze X Cambodian. Crazy old school Thai weed!

Finish Time 11-16 weeks/ Outside finish time: December / Variation: 3.5 / Odor level:2/ Mold Resistance: 6/ Yield: 4/ Ease of Growth: 3 / Feed Level: 2.5/ Sativa/ Indica: 100/0

Rm 109 Reefermans NI

Northern Lights #1 X reeferman's NLS

Finish Time: 9 weeks/ Outside finish time: October/ Variation: 3.5/ Odor level: 2.5 / Mold Resistance : 5 / Yield: 5/ Ease of Growth: 5/ Feed level: 4.5/ Stretch: 2-2.5X  
Sativa/ Indica: 20/80

Rm11- Kali's Bliss

For lovers of Kali Mist the Reeferman proudly presents Kali's Bliss an exceptional F-1 hybrid of reeferman's Cambodian and Brothers Grimm C-99.

Finish Time: 9-12 weeks/ Outside Finish Time: November/ Variation: 2.5/ Odor Level: 2.5/ Mold Resistance: 5 / Yield: 5 / Ease of Growth: 4 / Feed Level: 4 / Stretch: 2.4-3X  
Sativa/Indica: 90/10

RM- 111 William's Mango

Bc Mango X william's Wonder. Great Mega Yielding Early outdoor. Nice Earthy Skunky Berry Aromas, Good Indica meds. Golden and lime green buds with great bag appeal. Good Mold Resistance.

Finish Time: 7-8/ Outside finish time: late September/ Variation: 3.5/ Odor level: 3 / Mold Resistance: 5 / Yield: 5.5 / Ease of Growth: 5.5 / Feed level: 5 / Stretch: 2-2.5x  
Sativa/ Indica: 15/85

RM Willie Nelson

2005 High Times Cannabis Cup Winner - Best Sativa

An F1 hybrid between Vietnamese Black and Highland Nepalese . Its Willie favorite smoke , he tried it once and bought the whole crop. What else do you need to know? How about a sweet and sour, lemongrassy flavor and a reasonable 10-12 week flowering time? Good mold resistance and a friendly, soaring high round out the package .

Inside Finish Time: 10-14 weeks / Outside Finish Time: Late November / Variation: 3 / Odor Level: 3.5 / Mold Resistance: 4.5 / Yield: 4 / Ease of Growth: 4 / Feed Level: 4.5 / Stretch: 2.5-3x  
Sativa/Indica: 100/0

Notes:

Outdoor Finishing times are for 50 degrees latitude for seeds that are started in May or earlier. They should be fairly accurate for most of the contingent United States.

#### New haze lines

-----  
1. Haze Brothers Original Haze , the purest oldest haze line available this is a long flowering pure sativa that its really electric yeilds large outdoors in the tropics frosty 100% up buzz the strongest haze around the scent varies from cat piss to incence .

12-15 weeks flowering time indoors flower clones as soon as they root ideal for 12/12 from seed in the tropics planted under 11/13 in a shady area these plants get 7-8' with little care in north america these ladies will grow and grow but will never flower outdoors unless you darken .

2. 3/4 haze This is from the same lines that neville's haze was bred from much more efficient for the indoor cultivator than haze bro's it has slight indica traits its very nice and easier to grow haze that will finish in north america by nov 1st to 15th the yeild is medium the high is up and full . 9-12 weeks flowering period .

3 .Cambodian Haze This is our cambodian ibl x purple haze back crossed to our cambodian male a super nice South east asian hybrid that is amongst my favs its a good yeilder with decent bud density and a vibrant high with little to no paranoia no ceiling at all a commercial haze for indoor production the purple haze originally from the owner of possitronics in amsterdam combined with my cambodian that has been worked for well over a decade is well suited for the indoor cultivator aiming at top \$ in the med club or coffee shop market . 8-10 weeks

4. Reefs Silver Haze I did a massive selection on super silver haze our seeds came from skunkman and outshined all other super silver we have grown or seen , this super silver line is crazy high yeilding it falls in my opinion at the 50% northern lights 50% haze area and is really silver we grew out thousands of these some produced 3 litre sized buds , not my favorite haze but a classic in its best form ! 10 -11 weeks huge yeilds super dence lime green buds .

5. Colombian Haze,(1) haze bro's original haze meets colombian lowland from the indians of colombia come this modern sativa of the highest order this is a f-1 hybrid of the 2 we used the best haze bro's males to pollinate the best local sativa available .  
12-14 weeks This is a R and D strain .(untested)

6. A new addition to the cherry family

Cherry Haze this has been a work in progress for the last few years well tested tried and true this is a hybrid of cherry bomb and purple haze these were the frostiest most commercial viable hazes in our current project frosty as a snow ball tight nuggets that stink of cherry a decent yeilder that are unique from all the other haze selections the smell is like incence / cherry lollypops !  
9-10 weeks indoor outdoor

7.Durban Haze( Rand D strain )a hybrid of durban poison and haze bro's haze untested the durban's used were very nice and ultral fast with that classic licorice scent they were 100% consistant . 9-11 weeks suitable for northern climates

8. Vietnamese Haze(2)(R and D) this is a hybrid of Vietnamese black burmese and haze bro's original haze a super fantastic selection related to willie nelson we grew out hundreds of willjuana (vbxburma) and pollinated them with our best haze bro's males . untested 10 weeks + super hearty .

9. Thai Haze this is a early thai selection from skunkman's old stock pollinated with our 3/4 haze males , this was one of the most pressured selections done we went through thousands of seeds

to get these well tested lines . 10-13 weeks with classic thai dominant herb tall classic thai structure ! that dry thai smell like the sticks of old

#### Kabul Headstash

Its our kabul afghani x headstash a old school afghani that was 50% of the herijuana strain a strong high yeilding pure indica that will knock you on your ass in my forums at icmag you will find a grow report I beleave I just grew out a bunch and all were really spectacular pretty buds about 8 weeks flowering time indoors .

---

#### Hindu Kush x Haze

This is a IBL that orionally was from the Skunkman but never released its a Hybrid between haze and sams 30 year old hindu kush cutting that all hindu kush in holland is based on a lemony haze with long dense buds it yeilds very well the high is right in the middle 50% indica and 50% sativa .

They take about 10-11 weeks the indica dominant pheno's in this f-5 are the closest thing to the pure hindu kush cutting a real gem in any garden .

#### Blackseed

Black seed was my first strain its a oaxcan mexican that has been bred and grown in BC since the early 80's aka Moyie blackseed , its the parent line of kootnay gold and kootnay green .

Its a big prolific outdoor plant that adapts to many climates and conditions producing great nuggets year after year .

Perfect for breeding projects blackseed is 1 of the parents of my great Viper strain .  
10-11 weeks indoors mid to late oct out

#### Haze Brothers Original Haze

Crazy old school! This is the original haze that all haze hybrids were bred from. Strong cat pissy, super long flowering sativa, that will blow your mind! Very special, its back in all her glory. These plants stretch like mad, getting huge. You will need to flower cuttings as soon as they root to keep plants under 6 feet tall. Medium yielding, the best breeding haze available today .  
12 -16 weeks flowering time and worth the wait reasonable because no veg is required .

#### The Cam C-99 Cam 1 and Cam 3

The Cam C-99 Cam 1 and Cam 3 the cambodian lines are some of my best sativa's worked for many many years the cam 1 and cam 3 were both polinated by the same c-99 males the cam 1 is stouter and heay yeilding with a more indica profile the cam 3 is taller more sparse with a really amazing in your eyes high these were the 2 best plants from hundreds grown out .  
some plants flower as fast as 8 weeks to 11 weeks they all yeild very nice top notch sativa dominant that grows more like a indica !

#### Thai x Skunk

Thai x Skunk is old school thai. Tall growing, zippy thai like that of old. Pollinated with Skunkmans Skunk #1 males. Very nice old school weed, grows well in the tropics .  
12 weeks

#### Panama Red

Panama Red old school red hair from panama this is the pure strain very simular to the modern punta rojo from colombia but much stronger smoke very nice pure breeding strain that has been

proven a good breeder in my panama red skunk and a few others . 10-13 weeks flowering time

#### Cherry Bomb Indica

Cherry Bomb Indica is the pure old school indica that all my cb lines have been based on it always shows 2 pheno types tall and short its strong and easy to grow and a stable breeder everyone love the cherry bomb 8-9 weeks

#### Accidental Haze

Accidental Haze was a accident between a mexican and colombian punta rojo it smelled like old school haze yeilds nice and has very dence nuggets and high yeilds . 10-12 weeks

#### Williams Wonder

An indica dominant strain. An old school line from the old seed bank, it produces dense orange buds with a nice medical buzz in the body. It takes about 8-9 weeks and it yields well .

#### Blueberry Blast

A blueberry indica x northern lights of the highest order pure indica produces huge hard cola's of sweet blueberry flavored bud yeilds well and is easy to grow . 8-9 weeks flowering big yeilds .

#### Reeferman's Blueberry Indica

Bred from indica pheno's of dj shorts 1996 blueberry line pollinated with a killer blue moonshine male (blueberry hashplant) .

A little harder to grow yeilds medium with a pronounced blueberry aroma and indica high

#### King Skunk

This is the same clone used in Kings Kross except pollinated with a Sam the Skunkman Skunk #1 tetraploid male killer skunky buds high yeilds, with long running cola's very special limited edition line

#### Early Durban

This is a pure durban line from sam the skunkman bred with our ultra early auto afghani used in double afghani slam this is a super early sativa dominant plant that will yeild up to 8 Oz per plants easily finished by the 20th of sept , indoors she makes a nice 4foot sativa tree with thick hard buds that finish in 8 weeks the taste is black licorice top notch early south african genetics made comercial !

#### Early Island Indica

Its been a few years since we had this in stock it was one of our most popular strains when we were prairieboy seeds a super early afghani that produces rock hard nuggests indoors and out finished from sept 5th -15th with respectable yeilds and nice bag apeal .

#### Mendo Purps

The Mendo Purps I have is a IBL. The clone was crossed with Space Queen then back crossed

to the clone. I would say its about 60/40 sativa to indica. They like a little longer veg cycle. The buzz is uplifting and tends to make you laugh with almost no burn out effect. I let my plants go 9 to 10 weeks and I get between 1.5 to 2 ounces a plant I also highly recomend growing this strain all organic. The flavor is very strong purple spicey floral pine and stays in your mouth well after your done smoking it. This also has great bag apeal with lots purple and tons of resin.

#### RM early purple kush

The purple kush is a clone that has taken over BC it produces very nice plants that are heavy with resin and tasty , we found that she was low in vigor and was not a great producer , we used our Early island indica male to pollinate the purple kush the EII is a tough Indica that is also very inbred however in f-1 crosses it imparts serious resin production and earlier finishing time indoors and out as well as helping with mold resistance for outdoor crops .

This F-1 hybrid finishes in 7-8 weeks indoors with a decent yield and comes in outdoors in mid sept .

#### RM early purple kush

The purple kush is a clone that has taken over bc it produces very nice plants that are heavy with resin and tasty , we found that she was low in vigor and was not a great producer , we used our Early island indica male to pollinate the purple kush the EII is a tough Indica that is also very inbred however in f-1 crosses it imparts serious resin production and earlier finishing time indoors and out as well as helping with mold resistance for outdoor crops.

This F-1 hybrid finishes in 7-8 weeks indoors with a decent yeild and comes in outdoors in mid sept.

#### RM early bubba

Early Bubba kush EII x The pre 98 Bubba kush is a clone from california it produces very nice plants that are heavy with resin and tasty ,, we used our Early island indica male to pollinate the bubba kush the EII is a tough Indica that is also very inbred however in f-1 crosses it imparts serious resin production and earlier finishing time indoors and out as well as helping with mold resistance for outdoor crops.

This F-1 hybrid finishes in 8 weeks indoors with a decent yeild and comes in outdoors in mid sept.

#### Supreme Hash plant

Our best HP. This is the Hash plant line used as the base clone of all our previous hash plant selections this clone came to BC in the mid 80's and has rocked the comercial culture since this is a selection that is most simular to the RM38 except it is not a f-1 it has been back crossed to the clone many times the plant can easily yeild 1-2 lbs grown large indoors and has supreme bag appeal .

9-10 weeks flowering time early oct outdoors

#### Love potion #1

This is the first majour work we have done on the LP#1 in many years. This generation will be superior to all those that came before because the back cross to Santa Marta was done with a superior Santa marta colombian gold that we obtained in south america. lemony madness!

9-11 weeks indoors oct 20-30 outdoors

#### British colombian gold

We used the same early afghani we used to make bc mango except we used a highly selected very fast santa marta colombian gold male instead of the brazillian manga rosa. This is a very early high quality outdoor Love potion type that finishes in mid sept with crazy quality and yield.

7-8 weeks indoors.

#### Petrollia Headstash Pure

The pre russian war afghani is back this new generation of Headstash will prove superior due to heavy selection pressure we put on to breed these seeds, this is the old standard in heavy duty Indica weed tasty hashy flavor not too stinky and heavy heavy buds this is a ideal breeding plant everything its pollen touches become better!

9-10 weeks indoors

#### Apple Pie

this is very popular and has been out of stock for sometime its the nepalese male x to acapulco gold its one of our most popular strains and this generation will be better than ever! we used 3 highly selected females AG and our killer Nepalese to make this new generation of apple pie. the Acapulco golds we used this time around were selected from a huge population and were resin covered this is a true classic!

#### Reeferman grapefruit

This is our classic grapefruit a hybrid between the BC sweet pink grapefruit cutting. the male used is c-99 x sweetpink grapefruit. this is the purest grapefruit line available. it has a intense narcotic stone and a really sweet pungent aroma it finishes fast in 7-8 weeks and has really nice bag appeal and is frosty as hell.

#### Mazar-I-shariff

This is one of the best true breeding indicas in our collection these seeds were collected by sam the skunkman in the region over 30 years ago and maintained ever since this is the first commercial offering of this strain to my knowledge it blew away everyone at the 420 cup in 06 where we simply called it lemon kush It has a brilliant lemon odor and frosty hard buds it is very easy to grow a very stout indica that can be closely planted in tables this is very different from petrollia headstash in that it is a full on kush type not typical of most afghani strains

8-9 weeks flowering

#### Mazar-I-shariff x og kush

We used the mazar males to pollinate the LA Og kush clone these are untested but we are certain that they will blow away any other OG hybrids available. They should finish in 8-9 weeks with a strong lemon odor and og bud structure.

#### Pure King

This is the newest and potentially the very best king we have ever offered thanks to a old timer who gave us the King seed line thought lost twice! we were able for the first time to offer pure King this is a unbeatable kush type that is very similar to OG kush except it predates the entire kush craze in the USA dating back to the late 80's this seed line was developed from what we now call pink kush and a very old afghani line called queen that is no longer available its always a treat when something thought lost forever comes back! The taste on these is exceptional and the high is knock out our kings cross has won 2 cups, we used the same king clone as we have always used except in this generation we pollinated the king with a pure king male.

The king is amongst the very best plants in the world with crazy resin production super bag appeal and a taste that will blow most out of the water the resin from this plant won us a 1st place Hash cup in amsterdam crazy full melt clear dome bubble , the yeild can be very high in the correct conditions .

These seeds are very limited in supply due to some issues we had we only had a ltd amount of frozen pollen however we do have more seeds of the pure king and PK 1-1 coming and will make these available on a larger scale in the future . flowering time 7-9 weeks

#### Pink kush 1-1

We used the famous pink kush cutting ( I named it pink kush )that has been guarded for nearly 3 decades the mother line of the king and one of the most high regarded plants in my collection in this generation we pollinated her with the pure king pollen this is the purest and best PK line that I have offered to date it will pass on the flavor and taste and those pink hairs that are also dominant in the King line will be super dominant in this line , one of my main goals in working with the Pk was not to loose that killer flavor and crazy resin production and this in a obvious match the pure king is not as fussy as the pk in the feeding dept and is easier to grow overall this is the reason the king was bred is that the Pink kush which was called a HP before I called it pk was really fussy it can knock out huge colas and produce crazy amounts of resin if everything is on if its not it can disapoint , the king was initially bred to make a easier PK type .

In this hybrid which is about 87.5% pink kush expect a few issues like massive vegative death at week 8-9 this is more subtle on the pure king but on the pink kush line the plants look really rough all leaves turn yellow and die no matter what you do near the end the buds are 100% if everything is good but no matter what you do the leaves yellow .

This plant can yeild massive like our hash plant line if you dial it in.

The flowering time is 10-11 weeks not sooner or you will loose

Outdoors she takes untill november

#### Reeferman romulan is back in stock !

The grape pheno romulan is back the romulan is a special lady that we have been working with for many years I thought she was lost(clone) but now she is found ! thanks to a friend who just loves her so much we back crossed a f-3 Reeferman romulan to our clone these plants are very very frosty easy to grow indoors and outdoors and yeild very well the flavor runs from menthol to extreme grape I love the grape pheno ! Some pheno's show purple highlights due to the fact that I used a lavender pheno kodiak thunder ! as a pollen source to create the initial seedline from the clone !

they flower in 7-8 weeks indoors and finish mid to late sept outdoors

#### Double skunk (road Kill)

After tons of requests I have made a roadkill skunk indica variety be warned this stuff is seriously strong in both odor and high we used the classic Purple skunk aka bs skunk a skunk indica that is really tough and skanky it has been around for over 20 years , we selected a male from skunk#3 seeds I obtained in holland that were what skunkman told me was the stinkiest skunk around these are lime green skunks with large white crystals , the f-1 produced the worst odor I do not recomend this for city people I tumbled 1 small 3 oz plant in the pollinator and it stunk outside the building 400 yards away .

The buds are super in bag appeal the taste is really sweet and the hash tastes exactly like the buds and even the hash stinks in your pockets .

She flowers for a full 9 weeks mid oct outdoors
